

SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

METADATA

4.3 By 2030, ensure equal access for all women and men to affordable and quality technical, vocational and tertiary education, including university

4.3.1 Participation rate of youth and adults in formal and non-formal education and training in the previous 12 months, by sex

Definition

Percentage of youth and adults in a given age range (15-24 years, 25-54 years, 55-64 years, 15-64 years) participating in formal or non-formal education and training in the previous 12 months.

Formal education and training is defined as education provided by the system of schools, colleges, universities and other formal educational institutions that normally constitutes a continuous 'ladder' of full-time education for children and young people, generally beginning at the age of 5 to 7 and continuing to up to 20 or 25 years old. In some countries, the upper parts of this 'ladder' are organized programmes of joint part-time employment and part-time participation in the regular school and university system.

Non-formal education and training is defined as any organized and sustained learning activities that do not correspond exactly to the above definition of formal education. Non-formal education may therefore take place both within and outside educational institutions and cater to people of all ages. Depending on national contexts, it may cover educational programmes to impart adult literacy, life-skills, work-skills, and general culture.

Purpose

To show the level of participation of youth and adults in education and training of all types.

Calculation method

The number of people in selected age groups participating in formal or non-formal education or training is expressed as a percentage of the population of the same age.

$$PR_{AG_i} = \frac{E_{AG_i}}{P_{AG_i}}$$

where:

PR_{AG_i} = participation rate of the population in age group i in formal and non-formal education and training.

E_{AG_i} = participation of the population in age group i in formal and non-formal education and training.

P_{AG_i} = population in age group i .

i = 15-24 years, 25-54 years, 55-64 years, 15-64 years.

Interpretation

A high value indicates that a large share of the population in the relevant age group has access to and takes part in formal and non-formal education and training.

Type of data source

Household surveys.

Disaggregation

By age and sex.

Data required

Numbers of participants/non-participants by single year of age in formal and non-formal education and training.

Data sources

The SDG 4.3.1 indicator is calculated by the UIS based on the household-based survey data compiled by the Department of Statistics of the International Labour Organisation (ILO), which maintains a global database on national Labour Force Surveys or other relevant household surveys that cover labour market.

Quality assurance

Accurate data on participation in formal and non-formal education and training by age or specific age-groups and by sex are essential for calculating this indicator.

Limitations and comments

Formal and non-formal education and training can be offered in a variety of settings including schools and universities, workplace environments and others and can have a variety of durations. Participation rates do not capture the intensity or quality of the provision nor the outcomes of the education and training on offer.
