SDG 4 Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

METADATA

Target 4.3 By 2030, ensure equal access for all women and men to affordable and quality technical, vocational and tertiary education, including university

4.3.2 Gross enrolment ratio for tertiary education, by sex

Definition
Total enrolment in tertiary education regardless of age expressed as a percentage of the population in the 5-year age group immediately following upper secondary education.

Purpose
To show the general level of participation in a given level of education. It indicates the capacity of the education system to enrol students of a particular age group.

Calculation method
Number of students enrolled in tertiary education, expressed as percentage of the 5-year age group immediately following upper secondary education.

\[
GER_{5|8} = \frac{E_{5|8}}{SAP_{5|8|a}}
\]

where:
- \(GER_{5|8}\) = gross enrolment ratio in tertiary education (ISCED levels 5, 6, 7 and 8).
- \(E_{5|8}\) = enrolment in tertiary education (ISCED levels 5, 6, 7 and 8).
- \(SAP_{5|8|a}\) = population of the official age group \(a\) for tertiary education (ISCED levels 5, 6, 7 and 8).

Note: The population of the official age for tertiary education is estimated to be the 5-year age group immediately following upper secondary education. If the official entrance age to upper secondary is 15 years and the duration is 3 years, then \(a\) is the age group 18-22 years.

Interpretation
A high value of the indicator shows a high degree of participation in tertiary education by students of all ages.
Type of data source
Administrative data, household surveys.

Disaggregation
By sex from administrative sources; and by sex, location and income from household surveys and others as available.

Data required
Enrolment in tertiary education; population estimates by single year of age (if using administrative data) and data on the structure (entrance age and duration) of upper secondary education.

Data sources
Administrative data from schools and universities or household survey data on enrolment; population censuses and surveys for population estimates by single year of age (if using administrative data on enrolment); administrative data from ministries of education on the structure of upper secondary education.

Quality assurance
The indicator at each level of education should be based on total enrolment in all types of education institutions, including public and private.

Limitations and comments
The gross enrolment ratio is a broad measure of participation in tertiary education and does not take account of differences in duration of programmes between countries or between different levels of education and fields of study. It is standardised to some extent by measuring it relative to a 5-year age group for all countries but may underestimate participation especially in countries with poorly developed tertiary education systems or those where provision is limited to first tertiary programmes (which are generally shorter than 5 years in duration).
